765

**SEMI-AUTOMATIC THERMAL
WELDING MACHINE WITH
STRAIGHT-CUTTING OF FILM**

**insures your preparations better
hygiene and longevity**

Situated at the end of the preparation line, this thermal welder is particularly suited to small and medium requirements. It is robust and simple to use, is moderately priced and can occupy all the work-places in a kitchen. It is destined for long-term use, thanks to the utilization of materials in its construction that are extremely resistant to wear. Format change is elementary and can be executed in a flash without any additional equipment.

The machine is equipped with a temperature regulator and a timer for selection of welding time. The 765's framework is made of anodized aluminium and 18/8 stainless steel. Machined parts have been treated with anti-corrosion solutions and anodic oxidation.

Automatic film traction is carried out through a magneto-mechanical system.

The operator positions the container in a support drawer and pushes them both under the welding head, pulling the film from the roll onto the container.

Welding is mechanically comanded by the drawer end-run. Straight-cutting of the film is also automatic.

TECHNICAL DATA

DIMENSIONS:

435 mm width, 805 mm depth, 480 mm height

WEIGHT: 80 kgs.

POWER: 220v monophas + ground

HOURLY PERFORMANCE:

300-400 containers for the single format, 350-450 for the double format.
