

# ZB40

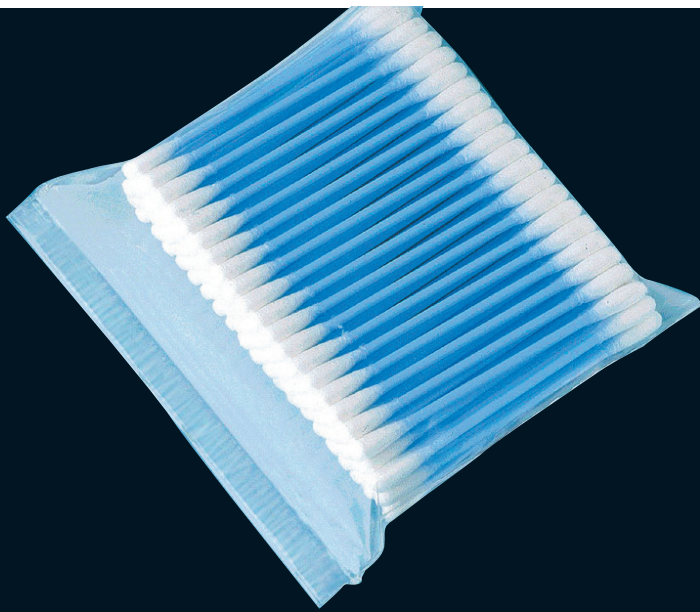

## SEMI-AUTOMATIC PACKAGING MACHINE

**Strema**

PACKAGING MACHINERY  
ITALY

## GENERAL DESCRIPTION

The ZB40 machine is suited for the automatic filling of plastic bags with cotton swabs. The machine is directly connected to the CF1 cotton swab manufacturing machine. It consists of a robust structure in enamelled steel and anodized aluminium. All components coming into contact with the product are in stainless steel, anodized aluminium and PVC. The remaining parts are in galvanized steel.

## OPERATION

Bags are hand-fed to the machine by the operator. Mobile razors with bags move back and forth intermittently. At the first introduction station mobile trays are filled. At the second station the bags are filled, removed from their trays and placed on a conveyor belt; at this point the zipper bags can be either manually closed or automatically welded shut.

## USABLE MATERIAL

The ZB40 may be used with plastic zipper bags (minigrip bags) or plastic bags without zipper closing, in which case the machine is equipped with an automatic welding unit. The sizes of the bag obviously depends on the number of cotton swabs contained. Accessories for a rapid change of the format allow the utilization of plastic bags in different sizes.

- The welding unit is suitable for the hot-sealing of bags.
- Mirror version (the shown version is right-hand).
- Special colour.
- Inoxidizable version.
- Customizing.
- Formats for filling up to 40 cotton swabs.
- Full protection cabin.

## PERFORMANCE

The ZB40 can package up to 2.000 cotton swabs per minute.

## DIMENSIONS

Length L2250 x W1050 x H1050 mm.

## OTHER PROPOSALS OF OURS

The ZB40 is offered alongside a whole range of other machinery produced by our firm, with which entire production lines can be set up for the manufacturing and packaging of cotton swabs. Not only this, but we also propose machinery for the production of long single headed cotton swabbed batons.

The following is a complete list of our line of production:

- Cotton swab manufacturing machine.
- Machine for the production of batons in cylindrical boxes.
- Machine for the packaging of cotton swabs in rectangular or square boxes.
- Machine for packaging cotton swabs in blisters.
- Machine for the production of wooden or plastic single-headed batons.
- Machine for the production of aluminium single-headed batons
- Conveyor belts

Shown data are purely indicative; we reserve the right to update or modify these indications with no prior notice.
